Students demand outstanding learning experiences at every stage of their education. Schools, Colleges and Academies are being challenged to make learning more personalised, with access to resources at all times and from any location.

These issues have become key concerns for parents and children choosing the best places for their education, which can cause financial challenges for educational institutions: a smaller cohort means less money to invest. Choosing the right technology and services can help you create world-class educational experiences for students, while helping to reduce costs and get excellent value from your budgets.

Canon has worked for many years with educational establishments across the UK. We've developed a suite of solutions and services that give teachers and administrators the technology they need to work efficiently and productively, and provide high levels of service to students and their parents.

We have helped schools streamline their admission and enrolment processes, simplifying data capture and reducing errors. This cuts down the time and money wasted on running a key function of school life. Our mobile services, such as mobile printing, also help to extend essential services to students and teachers beyond the walls of schools and colleges. We back all these solutions and services with expertise and experience that allows them to be adapted specifically for the needs of the organisations we are working with. We enable change for the better, without disrupting the daily routine, and with clear measures of return on investment.

Canon have a suite of solutions and services available for your school, college or academy through 6 Lots of this framework.

Information Sharing

Securing and keeping track of the vast pool of documents, images and data generated within the education sector are time-consuming but vital processes. Canon solutions and services allow

controlled and monitored access for authorised users, including third parties such as regulators or examination boards, while maintaining strict version control.

We can eliminate duplication and speed up collaboration and sharing.

Student case fulfilment

Scan and capture technology can save hours of manual processing for enrolments and admissions, providing real-time access to important information. Data capture and verification can be automated, speeding up responsiveness to students.

Compliance management

Canon's compliance management includes security and archiving solutions, as well as access controls for sensitive data such as student records. You need quick retrieval and detailed audit

trailing, without having to spend wasteful hours on routine record keeping. We can also extend the control and protection out into the mobile world.

Internal communications

Distributing essential digital and printed information internally can be made easier and less costly with the right printing and scanning services. Everyone in the school or College works under pressure, so any delay in communication can be disruptive. Canon solutions can automate and digitise many of the routine processes of communication, while ensuring print services are as cost-efficient as possible.

External communications

Parents, regulators, governors, partner schools; you need effortless and effective communication with all the stakeholders associated with your organisation. As with your internal communications, Canon's

printing, automation and digitisation solutions can take away much of the laborious work and extra cost involved in ensuring the right information reaches the right people, in the right format, at the right time.

Remanufacturing

Schools and Colleges will benefit from our environmentally friendly remanufactured multifunctional devices (MFDs) that are supplied with the same service plan as our standard machines, meaning no matter what the mix of devices is within your print infrastructure, they will experience the same high level of service throughout.
